Chapter 1 THEORETICAL BACKGROUND

1.1	Introduction	1
1.2	Band Theory of Solids	5
1.2.1	Band model for a semiconductor	5
1.2.2	Conductance and carrier generation in semiconductors	7
1.3	Photoelectrochemical Energy Conversion with Semiconductors	9
1.3.1	Photoionization and charge separation at the semiconductor/electrolyte interface	9
1.3.2	Formation of the schottky barrier at the semiconductor/electrolyte interface	12
1.4	Photoelectrical Devices	18
1.4.1	Electrochemical photovoltaic cells (PECs)	18
1.4.2	Theoretical aspects of PECs	22
1.4.2.1	Generation of the photocurrent and the photovoltage	22
1.4.2.2	Solar to electrical conversion efficiency	30
1.4.2.3	Parameters controlling the efficiency of PECs	32
1.4.2.4	Strategies employed to improve the efficiency of PECs	35

1.5	Spectral Sensitization of Semiconductor Electrodes	35
1.5.1	light induced current generation in dye sensitized PECs	36
1.6	Artificial Photosynthesis: Nanocrystalline Semiconductor Electrodes	42
1.6.1	Quantum size effects in colloidal semiconductor particles	45
1.6.2	The effect of pH in colloidal particles	46
Chapter 2	PHOTOCURRENT ENHANCEMENT IN LOW BANDGAP SEMICONDUCTOR ELECTRODES BY SURFACE ATTACHED DYES	48
2.1	Introduction	48
2.2.	Experimental	51
2.2.1	Deposition of Cu ₂ O films on copper substrate	51
2.2.2	Deposition of CdS thin films on Indium-Tin-Oxide glass	54
2.3	Results and Discussion	56
2.3.1	Dye coated polycrystalline Cu ₂ O films	56
2.3.2	Polynuclear metal cyanide films coated CdS thin films	71
Chapter 3	SENSITIZATION OF MICROPOROUS WIDE BANDGAP SEMICONDUCTOR ELECTRODES WITH NATURAL SENSITIZERS	86
3.1	Introduction	86

3.2	Experimental	89
3.2.1	Deposition of CuI on conducting glass substrate	89
3.2.2	Deposition of TiO ₂ films on conducting glass substrate	92
3.3	Results and discussion	95
3.3.1	Chlorophyll sensitized CuI photocathodes	95
3.3.2	Metal complexes as photosensitizers on TiO ₂ photoanodes	109
	References	119
	Conclusion	128
	Research publications arisen during the period of study	130
