Abstract	iv
Acknowledgement	viii
List of Figure	xiv
List of Tables	xix
Chapter 1	
1.1 Introduction	1
1.2 Objectives of the study	3
1.3 Study area	4
1.3.1. Soils of the Study Area	5
1.3.2. Agro-climatic types of the study region	6
1.4 Layout of the Thesis	8
Chapter 2	
2. Literature Review	9
2.1 Historical approach of Water Resource Management in Sri Lanka	9
2.2 Home Garden Irrigation Schemes	12
2.2.1 Definitions of Home Gardens	14
2.2.2 Research carried out in Home Garden Agriculture	15
2.2.3 Water risk elimination methods in home gardens	16
2.2.4 Rainwater harvesting	16
2.2.5. Suitable Irrigation Systems for home gardens	17
2.3 Agro-Climatological Definitions	20
2.4 Drought	28
2.4.1 Drought conditions in Sri Lanka.	31
2.5 Summary	31

Chapter 3

Part I -Methodology

3	Assessment of Irrigation Requirement	34
3.1	Crop Water Requirement (ET_c)	34
3.1.1	Reference Evapotranspiration (ET_0)	35
3.1.2	Crop Coefficient	37
3.2	CROPWAT Computer Program	37
3.2.1	Required input data	37
3.2.2	Model Output	40
3.2.3	Calculation of Irrigation Requirement	40
3.3	Methods of Analyzing Rainfall and Droughts	41
3.3.1.	Distribution of Rainfall	41
3.3.2.	Probability of occurrence of rainfall	42
3.3.3	Rainfall frequency	43
3.4	Program FIRST	44
3.4.1	Calculating of Probability of Rainfall	44
3.4.2	Frequency and probability of dry and wet spells	45
3.4.3	Forward accumulation of certain amount of rainfall at a desired probability	45
3.5	Mapping	46
Part II -Results and Discussion		
3.6	Introduction	47
3.7	Materials and Methods	48
3.7.1	Rainfall	48
3.7.2.	Evaporation	50
3.7.3	Crop and Plant data	50
3.8.	Identification of dry periods.	51
3.8.1	Monthly minimum rainfall totals of 75 mm	51
3.8.2.	Probability of 10 mm rainfall in a week	52
3.8.3	Weekly MAI	54
3.8.4	Assessment of Dry weeks	56

	Page No
3.9 Optimum crop commencement periods	59
3.9.1. Crop Commencement time based on Water Balance Method – CROPWAT program	60
3.9.2 Crop commencement time based on 100 mm of forward rainfall accumulation method	63
3.9.3 Commencement time based on initial probability of 10 mm weekly rainfall	64
3.9.4 Commencement time based on Weekly Moisture Availability Indices (MAI)	65
3.9.5 Crop commencement time based on the survey of farmers	66
3.9.6 Comparison of crop commencement time obtained from different methods	67
3.10 Irrigation need for crops with optimum planting date	72
3.11 Summary	75
Chapter 4	
Part I - Methodology	
4. Experimental setup to determine a suitable irrigation system	78
4.1 Location of the experimental area	81
4.2. Determination of Physical properties of the soil	82
4.2.1. Bulk Density	82
4.2.2 True Density	82
4.2.3. Porosity	83
4.2.4. Aggregate Analysis of the soil	83
4.2.5 Field Capacity	84
4.2.6 Permanent Wilting Point	84
4.2.7 Infiltration rate	85
4.3 Selection of suitable subsurface irrigators	86
4.3.1 Design of clay pots	86
4.3.2. Previous studies on Determination of Wetting Pattern	88
4.3.3 Experimental setup for determining wetting pattern from clay pots	89
4.3.4 Design of clay emitters for trickle irrigation system	92

	Page No
4.4. Design of auto irrigation systems	93
4.4.1. Subsurface pot irrigation network <i>I</i>	93
4.4.2 Subsurface Pot Irrigation Network <i>II</i>	95
4.4.3 Subsurface Trickle Irrigation System	97
 Part II - Results and Discussion	
4.5 Selection of a suitable sub irrigator based on the wetting pattern	99
4.6 Soil Moisture Distribution with Depth of Soil from Round shaped pots and designed emitters	104
4.7 Rate of water loss by pots and emitters with time	105
4.8 Assessment of the subsurface pot irrigation network <i>I</i>	109
4.8.1 Irrigation water requirement	109
4.8.2. Growth and development of tomatoes under different irrigation systems	112
4.8.3 Yield of tomatoes under different irrigation systems.	113
4.9 Comparative study of the subsurface pot irrigation and the trickle irrigation systems	114
4.9.1 Irrigation water consumption by curry chilies	114
4.9.2 Growth and Development of the crop	117
4.9.3 Development of roots	118
4.9.4. Yield of crop	119
4.9.5 Relationship between pan evaporation and water diffusion through selected irrigation systems.	121
4.10 Summary	123
 Chapter 5	
5.1 Introduction	126
5.2 Determination of roof runoff coefficient from different roof tops	128
5.2.1 Water collection from the existing roofs	129
5.2.2. Water collection from experimentally designed roofs	129
5.2.3 Estimation of runoff Coefficient of different types of roofs	131
5.3 Methods of designing micro level rainwater harvesting tanks for home garden irrigation	133

	Page No
5.3.1 Storage capacity	133
5.3.2 Rationing method	136
5.2.3 Rapid depletion Method	137
5.2.4 Mass Curve Method	138
5.2.5 Behaviour Analysis	139
5.3 Determination of Optimum Tank Capacity	141
5.4 Summary	151
Chapter 6	
6.1 Summary.	152
6.2 Conclusions	154
6.2.1 Agro-climatological classification of Matara region	154
6.2.2 Number of dry weeks in an annual cycle	155
6.2.3 Crop Commencement Time	156
6.2.4 Irrigation system	159
6.2.5 Roof Water Tank	159
6.3 RECOMMENDATIONS	159
6.3.1 Identification of Dry Weeks	159
6.3.2 Identification of Crop Commencement Time	160
6.3.3 Irrigation System	160
6.3.4 Roof Water Tanks	160
7. References	161
8. Appendices	180

List of Figures
