ACKNOWLEDGEMENT.....	I
ABSTRACT	II
LIST OF TABLES	IV
LIST OF FIGURES	VI
LIST OF PLATES.....	VIII
CHAPTER 1	
General Introduction	
1.1 Coral Reefs.....	01
1.1.1 Introduction.....	01
1.2 Classification of coral reefs	02
1.2.1 Structure of coral reefs	02
1.2.2 Types of reefs	02
1.2.1.1 Fringing reefs.....	04
1.2.1.2 Barrier reefs.....	04
1.2.1.3 Atolls.....	04
1.2.1.4 Evolution of reefs during tectonic subsidence according to Charles. Darwin's hypothesis (1842).....	05
1.2.2 Taxonomy of reef building corals	05
1.3 Anatomy and biology of corals.....	07
1.3.1 Introduction.....	07
1.3.1.1 Coral polyp.....	07
1.3.1.2 Zooxanthellae and symbiotic relationship.....	11
1.3.1.3 Photosyntythesis of Zooxanthellae	12
1.3.1.4 Feeding Polyp	12
1.3.1.5 Coral bleaching	13
1.3.1.6 Methods of Reproduction, propagation and growth of Corals	14
1.3.1.6.1 Asexual reproduction of corals.....	14
1.3.1.6.2 Sexual reproduction of corals	14
1.3.1.6.3 Reproductive behaviour and spawning under sexual reproduction.....	15
1.4 Coral reefs of the world.....	16
1.4.1 World Distribution.....	16
1.4.2 Threats to coral reefs.....	17
1.4.3 Status of coral reefs of the world.....	18
1.5 Coral reefs in Sri Lanka.....	19
1.5.1 General information on Sri Lanka	19
1.5.2 Coral reef research in Sri Lanka.....	24
1.5.3 Reef resources	25
1.5.4 Coral reef Degradation in Sri Lanka	26
1.6 Objectives of the research	28

CHAPTER 2		Page
Biophysical status and physicochemical condition of the selected reef sites in the coastal belt of Southern Sri Lanka		
2.1	Introduction	29
2.1	Study reef sites	30
2.2.1	<i>Polhena fringing reef</i>	30
2.2.2	<i>Weligama fringing reef</i>	31
2.2.3	<i>Meteorological information</i>	32
2.3	Materials and Methods	35
2.3.1	<i>Preparation of maps</i>	35
2.3.2	<i>Monitoring the physicochemical parameters</i>	36
2.3.2.1	<i>Sampling Sites Periods and Frequency</i>	36
2.3.2.2	<i>Techniques and equipment's used to assess water quality parameters</i>	37
2.3.2.3	<i>Data Sets and Analysis</i>	38
2.3.3	<i>Identification of dominant Scleractinian corals, macro algae and sea grasses</i>	38
2.3.4	<i>Determinations of the dominant life forms of the sessile benthic Community</i>	39
2.3.4.1	<i>Site Selection</i>	39
2.3.4.2	<i>Determination of the Dominant hard Coral Cover, macro algae and other abiotic components</i>	42
2.3.4.3	<i>Coral recruitment at Polhena</i>	43
2.3.4.4	<i>Determination of recovery of Acropora fragments</i>	43
2.3.4.5	<i>Determination of the percentage cover of Sea grasses</i>	44
2.3.4.6	<i>Analysis of data on dominant corals other reef component and sea grass</i>	44
2.4	Results	
2.4.1	<i>General information</i>	46
2.4.2	<i>Status of the corals other reef components and Physicochemical Condition</i>	46
2.4.3	<i>Physicochemical condition</i>	46
2.4.4	<i>Scleractinian Coral cover diversity and other biotic reef components of Polhena and Weligama reef lagoon</i>	48
2.4.5	<i>Recovery of Acropora fragments</i>	58
2.4.6	<i>Recruitment of corals of Polhena reef lagoon</i>	59
2.4.7	<i>Sea grasses cover and diversity</i>	59
2.5	Discussion	63

Chapter 3		Page
Common anthropogenic processes that have adverse effects on two fringing coral reefs Southern Sri Lanka		
3.1	Introduction	70
3.2	Study area	71
	3.2.1 <i>Polhena fringing reef</i>	71
	3.2.2 <i>Weligama fringing reef</i>	71
3.3	Materials and methods	72
	3.3.1 <i>Introduction</i>	72
	3.3.2 <i>Socioeconomic Investigation</i>	73
	3.3.3 <i>Tools used for socioeconomic data collection</i>	73
	3.3.4 <i>Detection of fishing activities/ornamental fish collection</i>	74
	3.3.5 <i>Detection on coral Mining</i>	74
	3.3.6 <i>Coconut husk seasoning and coir Industry</i>	74
	3.3.7 <i>Detection of recreational activities</i>	74
	3.3.8 <i>Detection and mapping of physical damages to the reef by boat Anchoring</i>	75
3.4	Results	76
	3.4.1 <i>Recreation activities</i>	76
	3.4.2 <i>Ornamental fish collection and other fishing practices</i>	77
	3.4.3 <i>Boat Anchoring</i>	78
	3.4.4 <i>Coral Mining</i>	80
	3.4.5 <i>Coir Industry</i>	81
3.5	Discussion	82
Chapter 4		
Summery of the impact of natural processes and anthropogenic activities at Polhena and Weligama Reef Sites		
4.0	Introduction	88
4.1	Overview of the study	89
4.2	Conclusions	90
4.3	Major Contribution and recommendation of the study	91
4.4	Future research	94
References		95

List of Tables

	Page
Table 1.0: Anthropogenic and natural factors affecting reefs in Sri Lanka and their relative importance and extent (modified from Rajasuriya and White 1995)	27
Table 2.0 : Summary of meteorological data of Matara District for the study period	34
Table 2.1: Schedule for data collection which took place from 21.09.1999 to 04.01.2002 at Polhena and from 06.10.1999 to 12.01.2001 Weligama lagoon reef	36
Table 2.2: Physicochemical parameters recorded from Polhena reef site for the year 1999, 2000, and 2001. [Mean \pm Standard deviation (SD)] n- Number of observations	51
Table 2.3: Physicochemical parameters recorded from Weligama reef site for the year 1999, 2000, and 2001. [Mean \pm Standard deviation (SD)] (n- Number of observations)	51
Table 2.4: Comparison of Physicochemical parameters [Mean \pm S.D.(n)] of PRL and WRL (n – number of observations)	51
Table 2.5: Mean percentage cover (Mean) of corals and other habitat components per transect and standard deviation (SD) recorded for Polhena and Weligama reef lagoons for the transects carried out from August 1999 to January 2002. Differences of the cover composition and coral genera of the two habitats was tested using Kruskal – Wallis rank test (p indicated in the table, level of significance: $p < 0.05$, ns = not significant) and Shannon Wiener Diversity Index (SWDI) : N= number of transects. Coral genera listed in alphabetical order	52
Table 2.6: Comparison of important Physicochemical parameters [Mean \pm S.D.(n)] of PRL and WRL (n – number of observations) and percentage live coral cover [Mean percentage \pm S.D.(n)] , WRL (n – number of observations)	53
Table 2.7: Recovery of fragments and branches of <i>Acropora</i> as estimated by randomly placing a grided quadrat (25 \times 25 cm), within fixed 10 m ² area at boat landing site and non landing site at WRL	59

Table 2.8: Seasonal variation of percentage Mean \pm SD (standard deviation) and Shannon Weiner Diversity Index (SWDI) of Dominant Sea grass species recorded from Polhena and Weligama reef lagoon during the study. ns = not significant, p= probability, n= number of observations	61
Table 3.1: Information on hotels and restaurant located in vicinity of Polhena and Weligama reef sites	76
Table 3.2: Number of visitors engaged in different recreational activities at different sampling days at Polhena Lagoon Reef from August 1999 to December 2001	77
Table 3.3: Number of ornamental fish collectors observed during the period of study at Polhena reef Lagoon and Weligama reef lagoon from August 1999 to December 2001	77
Table 3.4: Different fishing methods practiced in the study areas, and their relative destructiveness to the coral reefs. (+) recorded, (-) not recorded	78
Table 3.5: Number of boats anchored at the Weligama Reef Lagoon according to the counts taken during the survey August 1999 to December 2001	78
Table 3.6: Summary of the data on Coral Mining from Polhena to Weligama	80

List of Figures

	Page
Fig. 1.1: Classification of Coral reefs according the geological origin (A) Fringing reef (B) Barrier Reef (C) Atoll	03
Fig. 1.2: Corals in the phylum Coelenterata; the taxa of hermatypic reef building corals are placed in side the frame of dotted line.	06
Fig. 1.3: General Structure of the polyp and the underlying skeleton of reef building organism	08
Fig. 1.4: (A)Diagrammatic representation of the skeletal elements of Scleractinian coral ; (i) Normal cycles of septa (ii) Pourlatus plan, numbers indicate cycles (B)Different patterns of corallite formation	10
Fig. 1.5: Distribution of coral reefs of the world	16
Fig. 1.6: Geographical location of Sri Lanka in the Indian Ocean	19
Fig. 1.7: Distribution of Coral reefs in Sri Lanka	22
Fig. 1.8: Condition of the Coral reefs of Sri Lanka in 1998	23
Fig. 1.9: Surface currents around Sri Lanka	24
Fig. 2.1: Map showing study area located in Matara District, Southern Sri Lanka	30
Fig. 2.2: Location of Polhena fringing reef Matara, Matara District, Southern Sri Lanka	31
Fig. 2.3: Weligama fringing reef site, Matara District Southern Sri Lanka	32
Fig. 2.4: Variation of monthly rainfall and air temperature of Matara District, Southern Sri Lanka	34
Fig. 2.5: Map of Polhena reef area with sampling locations	40
Fig. 2.6: Map of Weligama fringing reef including study locations, leeward sea grass bed and fishing boat landing site	41
Fig. 2.7: (a) Variation of physicochemical parameters of Polhena reef lagoon Matara southern Sri Lanka(b) Variation of dominant live hard coral cover for the permanent transects carried out from different periods during the study.	49

	Page
Fig. 2.8: (a) Variation of physicochemical parameters of Polhena reef lagoon Matara Southern Sri Lanka, (b) Variation of dominant live hard coral cover for transects carried out from different periods during the study	50
Fig 2.9: Minor live coral genera percentage cover values representing from the total live minor genera cover recorded for Polhena reef lagoon within the permanent transect area according to the transects carried out from August 1999 to January 2002	57
Fig 2.10: Minor live coral genera percentage cover representing from the total live minor coral genera cover recorded for the rocky area of the Weligama reef lagoon from June and July 200	57
Fig.2.11: Recovering percentage of <i>Acropora</i> fragments	58
Fig 2.12: Variation of Sea grass cover (a) Polhena reef lagoon (b) Weligama reef lagoon	60
Fig. 3.1: Map showing the study area considered for different anthropogenic processes along the coastal belt between Polhena and Weligama	72
Fig. 3.2: Boat anchoring site at Weligama reef lagoon	79

List of Plates

Page

Plate 1:	Recruitment and Mortality of <i>Pocillopora</i> Initial observation (A), <i>Pocillopora</i> recruit in June 2000 (B), in July 2000 (C) and <i>Pocillopora</i> recruit dead August 2001	54
Plate2:	Common corals at Polhena, re-colonization of <i>Acropora</i> (A), re-colonization of <i>Pocillopora</i> (B) and Soft Coral – <i>Sinularia</i> (C)	55
Plate 3:	Common corals at Weligama Reef Lagoon, <i>Acropora</i> (A), <i>Montepora</i> (B) and Corallimorpharians growing on dead corals (C)	56
Plate 4:	Common Seagrass species recorded (A) <i>Cymodocea</i> sp. (B) <i>Halodule</i> sp. belongs to Family: Cymodoceaceae and (C) <i>Halopila</i> sp. Belongs to Family : Hydrocharitaceaceae	62
Plate 5:	Common anthropogenic activities at Polhena and Weligama (A) Ornamental fish collection (B) Coconut husk seasoning pans (C) Recreational activities at Polhena (D) Fishing Boat anchoring –Weligama (E1) & (E2) Lime kiln in operation at Walgama suburb of Matara city	87
