List of Figures 1

1 Introduction **2**
1.1 Forward for renaissance in science 2
1.2 Geometry in Newtonian Mechanics 6
1.2.1 Transformations 7
1.3 Gravitation in Newtonian Mechanics 8
1.4 Special Theory of Relativity 10
1.5 General Theory of Relativity 12

2 Mathematical Preliminaries **19**
2.1 Manifold 19
2.2 Vectors 25
2.2.1 Vectors on curved spacetime 26
2.2.2 Tangent vectors 28
2.2.3 Tangent vectors as directional derivatives 30
2.3 Directional derivatives as differential operators 31
2.4 Transforming one coordinate basis to another coordinate basis 32
2.5 Vector field 33
2.5.1 Scalar field and Covector field 35
2.5.2 Cotangent space 37
2.6 Tensors 39
2.6.1 The metric tensor 41
2.6.2 Riemann curvature tensor, Ricci tensor and Einstein tensor 52
2.7 Einstein field equations (EFE) 54
2.8 Coordinate transformation and Reference transformation 55

3 Exact solution for Einstein field equation when the Universe consist of dust **59**
3.1 Introduction 59

3.2 Slow-rotating spherically symmetric spacetime metric 62
3.2.1 Four velocity 68

4 Derivation of new transformation rules under a general coordinate transformations 76
4.1 Introduction 77
4.2 New Einstein field equation with non-homogeneous terms 80
4.2.1 Parameter u is a function of r and t 80
4.2.2 Parameter u is a function of r, t and θ 94

5 Conclusion and discussion 102
5.1 Conclusion 102
5.2 Discussion 105

A Cartan tetrad formation of equations in chapter (3) 110

Bibliography 114
