ABSTRACT.....	I
ACKNOWLEDGEMENTS.....	II
CONTENTS	III
LIST OF FIGURES.....	VII
LIST OF TABLES.....	VIII
LIST OF PLATES	X
LIST OF MAP	XII
LIST OF ANNEXURE	XIII
1. INTRODUCTION	1
2. REVIEW OF LITERATURE	
2.1 Origin and distribution of tea.....	4
2.2 Botany of tea.....	5
2.3 Tea shoots	6
2.3.1 Periodic shoot growth of tea.....	6
2.4 Yield component of tea.....	7
2.4.1 Number of shoots per unit area	8
2.4.2 Mean shoot weight	10

2.5 Plucking and vigor of the tea bush	10
2.6 Plucking after tipping and bringing into bearing	12
2.7 Tea harvesting policies.....	12
2.7.1 Standard of plucking.....	13
2.7.2 Severity of plucking	14
2.7.3 Frequency of plucking.	17
2.7.4. Selective plucking.....	17
2.7.5. Non selective plucking.....	17
2.8 Relationship between plucking policies and quality of the end product.....	18
2.9 Factors affecting shoot production and tea yield.....	18
2.9.1 Genotype.....	18
2.9.2 Length of the plucking round.....	19
2.9.3 Age from pruning.	19
2.9.4 Dormancy.....	19
2.9.5 Environmental factors	20
2.10 Rush crop	20
2.10.1 Reduction of plucking fields	21
2.10.2 Extension of plucking rounds	22
2.11 Development and release of new tea clones in Sri-Lanka.....	22
2.12 Tea processing	23
2.13 Mechanization of tea harvesting	24
2.13.1 Motorized machines	25
2.13.1.1 Output of motorized machines	27
2.13.1.2 Effects on bush and yield	29
2.13.1.3 Quality of made tea	30

2.13.1.4 Types of plucking machines.....	30
2.13.1.5 Limitations for the use of plucking machines	32
2.13.2 Plucking shears.....	33
2.13.2.1 TRI Selective Tea Harvester (TRISTH).....	34
2.13.2.2 Advantage of using TRI Selective Tea Harvester.....	36

3. MATERIALS AND METHODS

3.1 Location.....	38
3.2 Treatments	38
3.2.1 Cultivars (selections).....	38
3.2.2 Methods of harvesting.....	39
3.3 Data collection.....	41
3.3.1 Shoot characteristics.....	41
3.3.2 Data on the harvested crop	44
3.3.3 Data collected from tea bushes after harvesting.....	45
3.4 Analysis of data.....	47

4. RESULTS AND DISCUSSION

4.1 Colonel characteristics.....	48
4.1.1 Inter-nodal length.....	48
4.1.2 Leaf lengths.....	50
4.1.3 Leaf area.....	56
4.1.4 Leaf angle.....	61
4.1.4.1 Mother leaf apical angle.....	61

4.1.4.2 Mother leaf basal angle.....	63
4.1.4.3 Third leaf apical angle.....	65
4.1.4.4 Third leaf basal angle.....	67
4.1.5 Bush spread.....	70
4.1.6 Percentage of dormant shoots.....	72
4.1.7 Shoot density.....	75
4.2 Effects of method of harvesting	77
4.2.1 Total yield.....	77
4.2.2 Percentage of harvested dormant shoots and dormant shoots left on the bush after plucking	78
4.2.3 Percentage of damaged shoots.....	81
4.2.4 Percentages of shoots harvested.....	83
4.3 Parameters determining suitability of tea cultivars for shear harvesting	84
5. CONCLUSION.....	89
6. RECOMMENDATION	90
7. REFERENCES.....	91
ANNEXURES	96

LIST OF FIGURES

	Page
Figure 2.1 A typical tea shoot showing different leaves	8
Figure 2.2 Single leaf plucking (Light plucking)	15
Figure 2.3 Fish leaf plucking (Hard plucking)	16
Figure 2.4 Various types of plucking shears	33
Figure 3.1 Leaf angles and shape of the leaf	42
Figure 4.1 Relationship between mother leaf length and dormant shoot left after plucking	85
Figure 4.2 Relationship between third leaf length and dormant shoot left after plucking	85
Figure 4.3 Relationship between inter-nodal-length and yield	86
Figure 4.4 Relationship between mother leaf basal angle and damaged shoot percentage	87
Figure 4.5 Relationship between third leaf basal angle and soft pieces	88
Figure 4.6 Relationship between third leaf basal angle and damaged shoots...	88

LIST OF TABLES

		Page
Table 2.1	Output of plucking machine – Kawasaki NN 60H	28
Table 3.1	Selected tea cultivars for the experiment.....	39
Table 3.2	Selected cultivars to harvest shoots by two methods and assess the impact on growth, yield and quality of harvested crop.....	44
Table 4.1	Inter – nodal length of the used cultivars	50
Table 4.2	Length of the mother leaf	52
Table 4.3	Length of the third leaf	54
Table 4.4	Area of the mother leaf	57
Table 4.5	Area of 3 rd leaf	60
Table 4.6	Mother leaf apical angle	61
Table 4.7	Mother leaf basal angle	63
Table 4.8	Third leaf apical angle	67
Table 4.9	Third leaf basal angle	68
Table 4.10	Bush spread	70
Table 4.11	Percentage of dormant shoots	73
Table 4.12	Shoot density (number of shoots / m ²)	75
Table 4.13	Total yield (g/bush/round)	77
Table 4.14	Percentage of dormant shoots in the harvest	79

Table 4.15	Percentage of dormant shoots left on the bush after Plucking	80
Table 4.16	Percentage of damaged shoots	82
Table 4.17	Percentage of harvested shoots	83

LIST OF PLATES

	Page
Plate 2.1	Use of motorized machine 26
Plate 2.2	Use of TRI Selective Tea Harvester – TRISTH in use 35
Plate 4.1	Selection with higher inter – nodal length 49
Plate 4.2	Cultivar with lower inter – nodal length 49
Plate 4.3	Selection with longer mother leaf 51
Plate 4.4	Cultivar with shorter mother leaf length 51
Plate 4.5	Selection with longer third leaf 53
Plate 4.6	Selection with shorter third leaf 53
Plate 4.7	Selection with higher mother leaf area 55
Plate 4.8	Cultivar with lower mother leaf area 55
Plate 4.9	Selection with higher third leaf area 58
Plate 4.10	Cultivar with lower third leaf area 58
Plate 4.11	Selection with higher mother leaf apical angle 62
Plate 4.12	Cultivar with lower mother leaf apical angle 62
Plate 4.13	Selection with higher mother leaf basal angle 64
Plate 4.14	Cultivar with lower mother leaf basal angle 64
Plate 4.15	Selection with higher third leaf apical angle 66
Plate 4.16	Selection with shorter third leaf apical angle 66
Plate 4.17	Selection with higher third leaf basal angle 69
Plate 4.18	Cultivar with shorter third leaf basal angle 69

Plate 4.19	Cultivar with higher bush spread	71
Plate 4.20	Selection with lower bush spread	71
Plate 4.21	Selection with higher dormant shoots percentage	74
Plate 4.22	Selection with lower dormant shoots percentage	74
Plate 4.23	Selection with higher shoot density	76
Plate 4.24	Selection with lower shoot density	76

LIST OF MAP

LIST OF ANNEXURES

	Page
ANNEX 1: Climatic data during the period of research conducted	96
ANNEX 2: Analysis of Variance Procedure - Inter-nodal length	97
ANNEX 3: Analysis of Variance Procedure – Mother leaf length	98
ANNEX 4: Analysis of Variance Procedure – Third leaf length	99
ANNEX 5: Analysis of Variance Procedure – Mother leaf area	100
ANNEX 6: Analysis of Variance Procedure – Third leaf area	101
ANNEX 7: Analysis of Variance Procedure – Mother leaf apical angle	102
ANNEX 8: Analysis of Variance Procedure – Mother leaf basal angle	103
ANNEX 9: Analysis of Variance Procedure – Third leaf apical angle	104
ANNEX 10: Analysis of Variance Procedure – Third leaf basal angle	105
ANNEX 11: Analysis of Variance Procedure – Bush spread	106
ANNEX 12: Analysis of Variance Procedure – Dormant shoot percentage ...	107
ANNEX 13: Analysis of Variance Procedure – Shoot density	108
ANNEX 14: Analysis of Variance Procedure – Total yield	109
ANNEX 15: Analysis of Variance Procedure – Harvested dormant shoots ...	110
ANNEX 16: Analysis of Variance Procedure – Dormant shoots left on the bush after plucking	111
ANNEX 17: Analysis of Variance Procedure – Damaged shoots	112
ANNEX 18: Analysis of Variance Procedure – Harvested shoots	113
