summary

Chapter 1

General Introduction

Position of sesame in the world as an oil seed crop	1
Sesame in Sri Lanka	2
Diseases of sesame	3
Disease control	4
Objectives of the present study and presentation	5
Bibliography	7

Chapter 2

Isolation and Characterization of Rhizosphere Microflora of Sesame varieties and their evolution with plant age

Introduction	
Definition of the rhizosphere	10
Plant effects on the rhizosphere	12
The rhizosphere microflora and its effect on the plant	13
Objectives	14
Materials and methods	15
Results and discussion	18
Bibliography	28

Chapter 3

In vitro Antagonism of Rhizosphere Microflora on Sesame Root pathogen

Rhizoctonia solani

Introduction	31
Materials and methods	33
Results	36
Discussion	41
Bibliography	44

Chapter 4

Assessment of biological control of damping-off caused by *Rhizoctonia solani* in Sesame by rhizosphere bacteria

Introduction	45
Materials and methods	46
Results	49
Discussion	52
Bibliography	55
General dicussion	56

List of Figures

	Page No.
1. Diagrammatic representation of the structure of the rhizosphere in and around zones	11
2. Diagrammatic representation of bacteria isolated on different varieties of sesame	20
3. Diagrammatic representation of bacteria isolated at different growth status of 83-14	21
4. Diagrammatic representation of bacteria isolated at different growth status of MI3	22
5. Diagrammatic representation of bacteria isolated at different growth status of MB29W	23
6. Representative SDS-PAGE banding patterns of outer membrane proteins Of <i>P. fluorescens</i> isolates	24
7. A photograph showing inhibition of <i>R. solani</i> by <i>B. subtilis</i> isolates in 1/10 CDA	38
8. A photograph showing inhibition of <i>B. megaterium</i> by <i>P. fluorescens</i> in KBM	38
9. A photograph showing different action of <i>P. fluorescens</i> isolates of 3 ¹ and 24 (designated as s1 and s2) on six different rhizosphere bacteria	39
10. Probit values of percentage mortality of seedlings versus log values of concentration of sclerotia of <i>R. solani</i>	51

List of Tables

	Page No.
2.1. Species of bacteria isolated from sesame rhizosphere in different isolation media	18
2.2. Presence / absence of each species in the endorhizosphere of different varieties of sesame	19
3.1. <i>In vitro</i> inhibition (expression as zone of inhibition in mm) of pathogenic <i>R. solani</i> and non pathogenic <i>F. solani</i> by <i>B. subtilis</i> and <i>P. fluorescens</i>	36
3.2. Effect of <i>B. subtilis</i> on other rhizosphere bacterial species on 5% NA	37
3.3. Antagonistic activity of <i>P. acidovorans</i> , two electrotypes of <i>P. fluorescens</i> and <i>B. subtilis</i> against endorhizosphere bacteria of sesame in KB medium	37
4.1. Effect of concentration of inoculum of pathogen on percentage mortality of seedlings	49
4.2. Effect of seed bacterization with <i>P. fluorescens</i> on seedling stands in soil artificially infested with <i>R. solani</i>	50
4.3. Percentage protection of seedlings against <i>R. solani</i> by <i>P. fluorescens</i> isolates	50
