

# University of Ruhuna - Faculty of Technology

## BACHELOR OF ENGINEERING TECHNOLOGY

Level 1 (Semester 1) Examination, October 2018

Course Unit : TMS 1122 Chemistry of Materials

Time Allowed: 2 hours

\* Answer all four (04) questions

All symbols have their usual meanings

Related physical constants

Planck's constant

$$h = 6.6262 \times 10^{-34} \text{ Js}$$

mass of electron

$$m_e = 9.1091 \times 10^{-31} \text{ kg}$$

charge on electron

$$e = 1.60210 \times 10^{-19} \text{ C}$$

Permittivity of vacuum

$$\epsilon_0 = 8.854185 \times 10^{-12} \text{ kg}^{-1} \text{ m}^{-3} \text{ A}^2 \text{ s}^4$$

velocity of light

$$c = 3 \times 10^8 \text{ m s}^{-1}$$

01. Answer both parts.

(a) Answer following questions regarding He<sup>+</sup> ion using your knowledge of Bohr's planetary model.

i. Derive an equation to calculate the radius of n<sup>th</sup> orbit of He<sup>+</sup> ion.

(06 marks)

ii. Derive an equation to calculate the kinetic energy of electron in n<sup>th</sup> orbit of He<sup>+</sup> ion.

(06 marks)

iii. Derive an equation to calculate the total energy of electron in n<sup>th</sup> orbit of He<sup>+</sup> ion.

(02 marks)

iv. Calculate the wave number (cm<sup>-1</sup>) of radiation emitted by electron transition from n = 2 energy level to n = 1 energy level of He<sup>+</sup> ion.

(03 marks)

Related equations

$$\text{Coulomb's law: } F_{\text{attraction}} = \frac{1}{4\pi\epsilon_0} \frac{q_1 \times q_2}{r^2}$$

$$\text{Centripetal acceleration } a = \frac{v^2}{r}$$

$$\text{De-Broglie Equation (for angular momentum) } mvr = \frac{nh}{2\pi}$$

$$\text{Potential energy of electron P. E.} = \frac{-Ze^2}{4\pi\epsilon_0 r}$$

$$\text{Kinetic energy K. E.} = \frac{1}{2}mv^2$$

(b) Draw the Lewis structures of following molecules and determine their shapes according to Valence Shell Electron Pair Repulsion (VSEPR) theory.

(i) NCl<sub>3</sub>

(ii) CH<sub>4</sub>

(iii) H<sub>2</sub>S

(iv) BeCl<sub>2</sub>

(02 × 4 marks)

**02. Answer both parts.**

(a) Answer following questions regarding atomic structure.

i. Write down the Pauli's exclusion principle.

(02 marks)

ii. Write down the Hund's rule.

(02 marks)

iii. Draw a sketch to illustrate Aufbau principle.

(02 marks)

iv. Write down the names of four (04) quantum numbers of an electron in an atom.

(02 marks)

v. Name the quantum number which indicates the average distance between the nucleus and electron.

(02 marks)

vi. Write down the electronic configurations of following atoms.

(I) O

(II) Cl

(III) Mg

(IV) Cu

(04 marks)

vii. Write down the sets of four (04) quantum numbers corresponding to valence electrons in

Mg atom.

(02 marks)

(V) Answer following questions using your knowledge of molecular orbital theory.

i. Sketch the molecular orbital diagram and electrons in bonding and antibonding orbitals of a  $N_2$  molecule.

(03 marks)

ii. Calculate the bond order of  $N_2$  molecule.

(02 marks)

iii. Using your molecular orbital diagram, determine whether  $N_2$  is paramagnetic or diamagnetic.

(01 marks)

iv. Calculate the bond order of  $N_2^+$  ion.

(01 marks)

v. Using your molecular orbital diagram, determine whether  $N_2^+$  is paramagnetic or diamagnetic.

(02 marks)

### 03. Answer all parts.

(a) Answer following questions regarding thermal decomposition of  $\text{KMnO}_4$ .

i. Rewrite the balanced chemical reaction of the thermal decomposition of  $\text{KMnO}_4 (\text{s})$ .  
(04 marks)

ii. An amount of 3.160 g of  $\text{KMnO}_4 (\text{s})$  was thermally decomposed, completely. The released  $\text{O}_2 (\text{g})$  was collected under standard temperature and pressure.

- (I) Calculate the number of moles of  $\text{O}_2 (\text{g})$  released. (01 mark)
- (II) Calculate the volume of  $\text{O}_2 (\text{g})$  collected. (01 mark)
- (III) Calculate the weight of remaining solid residues after the thermal decomposition reaction. (assume that all  $\text{KMnO}_4$  has been decomposed.) (02 marks)

(Relative atomic masses  $\text{O} = 16, \text{K} = 39, \text{Mn} = 55$ )

(Molar volume of gas under standard temperature and pressure =  $22.4 \text{ dm}^3 \text{ mol}^{-1}$ )

(b) Answer following questions regarding the preparation and identification of chemical solutions.

i. A mass of 0.0140 g of  $\text{KOH} (\text{s})$  was dissolved in 250 mL of pure water.

- (I) Calculate the concentration of the solution. (03 marks)
- (II) Calculate the pH of the above solution. (02 marks)

ii. A solution of  $0.1 \text{ mol dm}^{-3} \text{ HCl} (\text{aq})$  is available in the laboratory. A portion of 25.00 mL was transferred to beaker and 225.00 mL of pure water was added to the beaker. The prepared solution was thoroughly mixed.

- (I) Calculate the concentration of the prepared solution. (03 marks)
- (II) Calculate the pH of the solution. (02 marks)

iii. A student forgot to label both of his  $\text{KOH} (\text{aq})$  solution and  $\text{HCl} (\text{aq})$  solutions. Propose a simple method to identify these solutions using usual chemicals available in the laboratory. (03 marks)

(c) Answer following questions regarding buffer solutions.

- i. Explain the concept of a buffer solution. (02 marks)
- ii. Provide two (02) examples for buffer solutions and name their chemical special involved. (01 × 2 marks)

# IUPAC Periodic Table of the Elements
