

CONTENT

1 INTRODUCTION

2 BASIC CONCEPTS AND THEORETICAL APPROACH

2.1 BAND THEORY

2.2 DISTINGUISH SEMICONDUCTOR, INSULATOR, METAL AND SEMIMETAL

2.3 SEMICONDUCTOR AND INSULATOR

2.3.1 INTRINSIC SEMICONDUCTOR

2.3.2 EXTRINSIC SEMICONDUCTOR

2.3.3 ORGANIC SEMICONDUCTORS

2.4 EXCITATION

2.4.1 THERMAL EXCITATION

2.4.2 PHOTO EXCITATION

2.4.3 MAJOR TRANSITIONS OF ELECTRON AND HOLES

2.5 TYPES OF CONTACT

2.5.1 METAL SEMICONDUCTOR
INTERFACE

2.5.2 ELECTROLYTE
SEMICONDUCTOR
INTERFACE

2.6 CONVERSION OF SOLAR ENERGY

2.6.1 PHOTOCONDUCTION AND
PHOTOVOLTAIC EFFECT

2.6.2 DYE SENSITIZATION

2.6.3 DYE COATING METHODS

2.7 H₂ & O₂ EVOLUTION FROM WATER

2.7.1 PRODUCTION OF
HYDROGEN USING SOLAR
ENERGY

2.7.2 PRODUCTION OF H₂ & O₂

3 H₂ EVOLUTION FROM PHOTOELECTROCHEMICAL CELL WITH n-Cu₂O PHOTOELECTRODE UNDER VISIBLE LIGHT IRRADIATION

- 3.1 INTRODUCTION
- 3.2 EXPERIMENTAL
- 3.3 RESULTS AND DISCUSSION

- 3.3.1 V-I CHARACTERISTICS

- 3.3.2 PHOTOCURRENT ACTION SPECTRA

- 3.3.3 H₂ EVOLUTION

- 3.3.4 TIME DEVELOPMENT OF THE PHOTOCURRENT

- 3.4 CONCLUSION

4 A SIMPLE TECHNIQUE TO FABRICATE HEXAGONAL CRYSTALS OF P-CU₂O AND THEIR CHARACTERISTICS WITH CONNECTION TO THE SOLAR ENERGY CONVERSION DEVICES

- 4.1 INTRODUCTION.

- 4.2 EXPERIMENTAL

- 4.2.1 PREPERATION OF COPPER PLATES

4.2.2 PREPERATION OF p-Cu₂O

4.2.2 PREPERATION OF Cu/p-Cu₂O/pCuSCN/DYE ELECTRODES

4.2.3 MEASURMENTS

4.3 RESULT AND DISCUSSION

4.3.1 SAMPLE CHARACTERIZATION BY XRD SPECTRA AND SEM

4.3.2 ABSORPTION PROPERTIES OF THE FILMS AND PHOTO-CURRENT ACTION SPECTRA

4.3.3 V-I CHARACTERISTICS

4.3.4 APPLICATION OF p-Cu₂O FILMS TO THE DYE SENSITIZED PECS BASED ON p-CuSCN

4.4 CONCLUSIONS
