Chapter 1	
Introduction	1
Chapter 2	
Fundamental Concepts and Theoretical Background	3
2.1) History of Langmuir –Blodgett Films	3
2.2) Fabrication of LB Films	5
2.2.1) Surface Tension	5
2.2.2) Surfactants	6
2.2.3) Monolayer Forming Molecules	7
2.2.4) Insoluble Monolayers	9
2.2.5) Surface Pressure	10
2.2.6) Surface Pressure - Area Isotherms	11
2.2.7) Deposition of LB Films	14
2.2.8) Different Types of Deposited LB Films	16
2.2.9) Present status and Future prospects of Langmuir Blodgett (LB) Films	19
2.2.10) Goals of constructing purposely designed Monolayer assemblies	21
2.2.11) Organized Monolayers	24
2.3) The absorption of radiation by Molecules	27
2.4) Unsaturation and Benzenoid Character	29
2.4.1) Axis of polarizability	31
2.5) Absorption Spectra	33
2.6) The Mechanism of the Dye Sensitised Photo Current	35

Chapter 3	
Aggregation Control of di-octadecyl Merocyanine Dye Films by Langmuir – Blodgett LB Technique	39
3.1) Introduction	39
3.2) Experimental	40
3.3) Results And Discussion	43
3.3.1) Absorption Properties of C ₁₈ -Mero-C ₁₈ Dye Films Prepared Under Zero Applied Potential	43
3.3.2) Absorption Properties of C ₁₈ Mero- C ₁₈ Dye Films Prepared Under Positive and Negative Biasing Potential	45
3.3.3) Aggregation Control Of C ₁₈ -Mero-C ₁₈ by interlocking R-C ₁₈ and Arachidic Acid	51
3.3.4) The Variation Of Photocurrent Quantum Efficiency With the Number Of Monolayer Of LB Films Of C ₁₈ -Mero-C ₁₈	56
3.3.5) Photocurrent Action Spectra p-CuI sensitised C ₁₈ -Mero-C ₁₈ Dye Films Prepared Under Positive and Negative Applied Potential	58
3.3.6) Photocurrent Enhancement Of p-CuI Sensitised Interlocked C ₁₈ -Mero-C ₁₈ + R-C ₁₈ (1:1) Mixture LB Films	60
3.4) Conclusion	65
3.5) References	66
