Abstract viii

List of Figures ix

Notations xi

1 Introduction 1

1.1 Reaction-Diffusion Systems 1

1.2 Overview of dissertation 4

2 Mathematical Modelling and Reaction-Diffusion Systems 6

2.1 Modelling Principles 6

2.1.1 General modelling procedure 7

2.1.2 Steps of modelling 8

2.2 Reaction Processes and Linear Algebra 10

2.2.1 Stoichiometry and Linear Algebra 10

2.2.2 Degree of Advancement of a Reaction 13

2.2.3 Atomic composition 14

2.2.4 Mass Balance 16

2.2.5 The law of Mass Action 18

2.3 Modelling of Reaction Processes 19

2.3.1 Formulation of Balance Equations 19

2.4 Modelling of Reaction-Diffusion Processes 24

3 Introduction to Finite Difference Method **29**

3.1 Introduction 29

3.1.1 Approximations for First order derivatives 30

3.1.2 Higher order derivatives 32

3.2 Convergence 33

3.3 Consistency 35

3.4 Stability 37

3.5 Finite Difference Schemes for Reaction-

Diffusion Systems 39

3.5.1 General form of a Reaction-Diffusion system and Finite Difference

Schemes 40

3.5.2 Construction of the finite difference schemes 41

3.5.3 Explicit Finite Difference Schemes 52

3.5.4 Implicit Finite Difference Schemes 52

4 Some Reaction-Diffusion Equations **53**

4.1 Reaction-Diffusion systems in chemical kinetics 53
4.1.1 Some simple Reaction and Reaction-Diffusion systems in chemical kinetics 54
4.1.2 A Reaction-Diffusion model of rock formation in the process of ground water transportation 61
4.2 Reaction Diffusion Systems in pattern formations 64
4.2.1 What is pattern formation 64
4.2.2 Turing instability 65
4.2.3 Alan Turing's spot-formation system 70
4.2.4 Hans Meinhardt's spot-formation system 72
4.2.5 Hans Meinhardt's strip-formation system 72
4.2.6 Gray-Scott model 72
4.2.7 FitzHugh-Nagumo Model 76
4.3 Some Reaction-Diffusion equations in population dynamics 78
4.3.1 Logistic Equation 78
4.3.2 Two species models 81
4.3.3 Lotka Volterra Equation 84
4.3.4 Time Delay Volterra Equation 85
4.3.5 A two species population model with diffusion terms 86
4.3.6 Three species predator-prey system 89
4.4 Reaction-Diffusion systems arising in medicine 90
4.4.1 Kermack-McKendrick system 90

4.4.2 Spread of Feline Immunodeficiency Virus(FIV) in the cat population or sexually transmitted diseases 91
4.4.3 Mathematical model of AIDS 92
4.4.4 Female CSW and male HIV transmision model[43] 94
4.4.5 Mathematical model for competition order of two antibodies to one antigen in astmatics[35] 97

5 Introduction to Semigroup Theory 100

5.1 Linear semigroups 100
5.1.1 Generation of C_0-semigroup 105
5.2 Analytic Semigroups 112
5.2.1 Generation Theorem for Analytic Semigroup 112
5.3 Analytic semigroups and reaction-diffusion systems 125

6 The Abstract Cauchy Problem 128

6.1 Linear Abstract Cauchy Problems 128
6.1.1 Homogeneous Abstract Cauchy Problem 128
6.1.2 Inhomogeneous Abstract Cauchy Problem 132
6.2 Semilinear Abstract Cauchy Problems 136

7 Global solutions of a Strongly Coupled Reaction-Diffusion System with different diffusion coefficients 146

7.1 Introduction 146
7.2 Existence of a local solution 150

7.3 Existence of Global solutions 151

7.4 Numerical Experiments 166

8 Discussion **169**

8.1 Summary and Conclusion 169

8.2 Future work 171

Appendix **173**

A Maximum Principle **173**

B Different types of Solutions of PDEs **176**

C Linear Systems **179**

C.1 Gauss Seidel iteration for Linear Systems 180

C.2 Successive Over-relaxation (SOR) method 181

C.3 Conjugate gradient method(CG) 182

List of publications **184**

Bibliography **185**

List of Figures

2.1 Information flow in model building [6] 8

2.2 Considered domain and a subset 25

3.1 Graphical representation of some first order derivatives 31

4.1 Solution of (4.1) when $k_1 = 0.05$ 54

4.2 Solution of (4.1) when $k_1 = 0.1$ 54

4.3 Solution of (4.2) when $k_1 = 0.05$, $k_2 = 0.001$ 55

4.4 Solution of (4.2) when $k_1 = 0.1$, $k_2 = 0.01$ 55

4.5 Solution of (4.2) when $k_1 = 0.001$, $k_2 = 0.05$ 55

4.6 Solution of (4.2) when $k_1 = 0.01$, $k_2 = 0.5$ 55

4.7 Solution of (4.3) when $k_1 = 0.1$, $k_2 = 0.001$ 57

4.8 Solution of (4.3) when $k_1 = 0.01$, $k_2 = 0.1$ 57

4.9 Solution of (4.4) when $k_1 = 0.01$,$k_2 = 0.005$, $k_3 = 0.001$ and $k_4 = 0.05$ . . . 58

4.10 Time evolution of (4.5) for the parameters $d_1 = 2 \times 10^{-5}$, $d_2 = 1 \times 10^{-5}$, and $k_1 = 5 \times 10^{-3}$ 60

4.11 Leopard model(This figure is taken from [51]). 71

4.12 Model of a Zebra (This figure is taken from [51]) 71

4.13 Spots on Giraffe shape domain (This figure is taken from [51]) 71

4.14 Some patterns obtained by using Reaction-Diffusion systems (This figure is taken from [51]) 71

4.15 Time evolution of the numerical solutions of equation (4.30) 74

4.16 Some patterns forms by the reaction-diffusion system (4.30). 75

4.17 some patterns formed by the reaction-diffusion system (4.33) 77

4.18 Solution of (4.34) for different reaction rates when k=100 79

4.19 Time evolution of the solution of (4.35) when d=0.001, r=0.1 and k=100.0 80

4.20 Solution of (4.42) when $\alpha_{12} = 0.9$, $\alpha_{21} = 0.6$ 85

4.21 Solutions of (4.42) when $\alpha_{12} = 0.5$, $\alpha_{21} = 0.6$ 85

4.22 Solution of (4.42) when $\alpha_{12} = 0.5$, $\alpha_{21} = 0.1$ 85

4.23 Time evolution of (4.48) for the above parameters 87

4.24 Some solutions of reaction-diffusion system (4.60) 99

5.1 Graphical representation of the region $\mathcal{E}_\omega$ 113

5.2 Graphical representation of the path Γ 114

5.3 Graphical representation of paths Γ and Γ' 115

5.4 Contours $\mathcal{C}_1$ and $\mathcal{C}_2$: $\mathcal{C}_1 = ABCDEFGHA$, $\mathcal{C}_2 = HIJKFGH$. 116

5.5 The path $\Gamma(|z|)$ 120

5.6 The contour $\mathcal{C}_1$ 124

7.1 Time evolution of u_1 and u_2. 168

8.1 Summary of possible future work 172
