

Faculty of Medicine, University of Ruhuna, Galle. Third Examination for Medical Degrees (Part II) October 2004

Pathology Paper I

Monday 25th October 2004

9.00am to 11.00 am 2 hours

(10 marks) ·

Answer ALL FOUR questions.

1.2 Briefly describe the macroscopic appearances of the growth patterns of gastric carcinoma other than malignant gastric ulcer. 1.3 Describe the microscopic appearance of 1.2,1 Benign gastric ulcer. 1.4 List 4 complications of benign gastric ulcer. 1.5 Write short notes on 2.1 Grading and staging of cancer. 2.2 Healing of a surgical incision. 2.3 Pathogenesis of glomerular injury in glomerulonephritis. Part C 3 3.1 Define the term corpulmonale. 3.2 Briefly discuss the pathogenesis of corpulmonale. 3.3 Describe the postmortem appearances on the body of a person who died of corpulmonale. Part D 4.1 Briefly describe the pathological basis of the following. 4.1.1 Anaemia in vitamin B 12 deficiency. 4.1.2 Increased bleeding tendency in liver disease. 4.1.3 Presence of haemosiderin in urine in haemolytic anaemia. 4.2 A 61 year-old female had felt persistent fatigue for the last two months. She has been apparently in good health previously and was not on any medications. He random plasma glucose is 11.7 mmol/L(210mg/dL). 4.2.1 What is the most likely diagnosis? (5 ma)	Answ	er each	part in a SEPARATE book.	
gastric ulcer from a malignant gastric ulcer. 1.2 Briefly describe the macroscopic appearances of the growth patterns of gastric carcinoma other than malignant gastric ulcer. 1.3 Describe the microscopic appearance of 1.2.1 Benign gastric ulcer. 1.4 List 4 complications of benign gastric ulcer. 1.5 Malignant gastric ulcer. 1.6 Grading and staging of cancer. 2.1 Grading and staging of cancer. 2.2 Healing of a surgical incision. 2.3 Pathogenesis of glomerular injuryin glomerulonephritis. 2 Part C 3 3.1 Define the term corpulmonale. 3 Briefly discuss the pathogenesis of corpulmonale. 3 Describe the postmortem appearances on the body of a person who died of corpulmonale. Part D 4 4.1 Briefly describe the pathological basis of the following. 4.1.1 Anaemia in vitamin B 12 deficiency. 4.1.2 Increased bleeding tendency in liver disease. 4.1.3 Presence of haemosiderin in urine in haemolytic dhaemia. 4.2 A 61 year-old female had felt persistent fatigue for the last two months. She had been apparently in good health previously and was not on any medications. He random plasma glucose is 11.7 mmol/L(210mg/dL). 4.2.1 What is the most likely diagnosis? 4.2.2 What investigation/s would you do to confirm your diagnosis? 4.2.2 What investigation/s would you do to confirm your diagnosis? 4.2.2 What investigation/s would you do to confirm your diagnosis? 4.2.2 What investigation/s would you do to confirm your diagnosis?	1	1.1	Part A Discuss how the macroscopic examination helps in differentiating benign	
gastric carcinoma other than malignant gastric ulcer. 1.3 Describe the microscopic appearance of 1.2.1 Benlgn gastric ulcer. 1.2 Malignant gastric ulcer. 1.2 Malignant gastric ulcer. 1.4 List 4 complications of benign gastric ulcer. Part B Write short notes on 2.1 Grading and staging of cancer. 2.2 Healing of a surgical incision. 2.3 Pathogenesis of glomerular injury in glomerulonephritis. Part C 3 3.1 Define the term corpulmonale. 3.2 Briefly discuss the pathogenesis of corpulmonale. 3.3 Describe the postmortem appearances on the body of a person who died of corpulmonale. Part D 4.1 Briefly describe the pathological basis of the following. 4.1.1 Anaemia in vitamin B 12 deficiency. 4.1.2 Increased bleeding tendency in liver disease. 4.1.3 Presence of haemosiderin in urine in haemolytic anaemia. 4.2 A 61 year-old female had felt persistent fatigue for the last two months. She has been apparently in good health previously and was not on any medications. He random plasma glucose is 11.7 mmol/L(210mg/dL). 4.2.1 What is the most likely diagnosis? 4.2.2 What investigation/s would you do to confirm your diagnosis? 4.2.2 What investigation/s would you do to confirm your diagnosis? 4.2.2 What investigation/s would you do to confirm your diagnosis? 4.3.3 Describe the microscopic appearance of part bear apparently in good health previously and was not on any medications. He random plasma glucose is 11.7 mmol/L(210mg/dL). 4.2.2 What investigation/s would you do to confirm your diagnosis? 4.3.4 Series and the part of the part of the last two months. She has been apparently in good health previously and was not on any medications. He random plasma glucose is 11.7 mmol/L(210mg/dL).			gastric ulcer from a malignant gastric ulcer.	(25 marks)
1.2.1 Benign gastric ulcer. (25 m (2		(1.2)	Briefly describe the macroscopic appearances of the growth patterns of gastric carcinoma other than malignant gastric ulcer.	(15 marks)
Part B Write short notes on 2.1 Grading and staging of cancer. 2.2 Healing of a surgical incision. 2.3 Pathogenesis of glomerular injury in glomerulonephritis. Part C 3 3.1 Define the term corpulmonale. 3.2 Briefly discuss the pathogenesis of corpulmonale. 3.3 Describe the postmortem appearances on the body of a person who died of corpulmonale. Part D 4.1 Briefly describe the pathological basis of the following. 4.1.1 Anaemia in vitamin B 12 deficiency. 4.1.2 Increased bleeding tendency in liver disease. 4.1.3 Presence of haemosiderin in urine in haemolytic anaemia. 4.2 A 61 year-old female had felt persistent fatigue for the last two months. She had been apparently in good health previously and was not on any medications. He random plasma glucose is 11.7 mmol/L(210mg/dL). 4.2.1 What is the most likely diagnosis? (5 ma		1.3	1.2.1 Benign gastric ulcer.	(25 marks) (25 marks)
2.1 Grading and staging of cancer. 2.2 Healing of a surgical incision. 2.3 Pathogenesis of glomerular injury in glomerulonephritis. Part C 3 3.1 Define the term corpulmonale. 3.2 Briefly discuss the pathogenesis of corpulmonale. 3.3 Describe the postmortem appearances on the body of a person who died of corpulmonale. Part D 4.1 Briefly describe the pathological basis of the following. 4.1.1 Anaemia in vitamin B 12 deficiency. 4.1.2 Increased bleeding tendency in liver disease. 4.1.3 Presence of haemosiderin in urine in haemolytic anaemia. 4.2 A 61 year-old female had felt persistent fatigue for the last two months. She had been apparently in good health previously and was not on any medications. He random plasma glucose is 11.7 mmol/L(210mg/dL). 4.2.1 What is the most likely diagnosis? (5 maillos)		1.4	List 4 complications of benign gastric ulcer.	(10 marks)
2.1 Grading and staging of cancer. 2.2 Healing of a surgical incision. 2.3 Pathogenesis of glomerular injury in glomerulonephritis. Part C 3 3.1 Define the term corpulmonale. 3.2 Briefly discuss the pathogenesis of corpulmonale. 3.3 Describe the postmortem appearances on the body of a person who died of corpulmonale. Part D 4.1 Briefly describe the pathological basis of the following. 4.1.1 Anaemia in vitamin B 12 deficiency. 4.1.2 Increased bleeding tendency in liver disease. 4.1.3 Presence of haemosiderin in urine in haemolytic anaemia. 4.2 A 61 year-old female had felt persistent fatigue for the last two months. She has been apparently in good health previously and was not on any medications. He random plasma glucose is 11.7 mmol/L(210mg/dL). 4.2.1 What is the most likely diagnosis? (5 ma. 4.2.2 What investigation/s would you do to confirm your diagnosis?				
2.2 Healing of a surgical incision. 2.3 Pathogenesis of glomerular injury in glomerulonephritis. Part C 3 3.1 Define the term corpulmonale. 3.2 Briefly discuss the pathogenesis of corpulmonale. 3.3 Describe the postmortem appearances on the body of a person who died of corpulmonale. Part D 4 4.1 Briefly describe the pathological basis of the following. 4.1.1 Anaemia in vitamin B 12 deficiency. 4.1.2 Increased bleeding tendency in liver disease. 4.1.3 Presence of haemosiderin in urine in haemolytic anaemia. 4.2 A 61 year-old female had felt persistent fatigue for the last two months. She had been apparently in good health previously and was not on any medications. He random plasma glucose is 11.7 mmol/L(210mg/dL). 4.2.1 What is the most likely diagnosis?
