Acknowledgements	xv
Abstract	xvii
1. Introduction	1
2. Justification and objectives of the study	7
3. 1. Male reproductive system	9
3.1.1. Development	9
3.1.2. Testis	11
3.1.2.1. Seminiferous tubules	13
3.1.2.2. Leydig cells	14
3.1.2.3. Sertoli cells	15
3.1.2.4. Spermatogenesis	17
3.1.2.5. Spermatozoon	19
3.1.3. Duct system of the male reproductive system	21
3.1.3.1. Ductuli efferentes	22
3.1.3.2. Epididymis	22
3.1.3.3. Ductus deference	22
3.1.4. Accessory glands of the male reproductive system	23
3.1.4.1 Seminal vesicles	23
3.1.4.2. Prostate gland	24
3.1.4.3. Bulbo urethral glands	24
3.2. Human seminal fluid parameters and sperm function tests	25
3.2.1. Introduction	25
3.2.2. Physical characteristics of semen	27
3.2.2.1. Liquefaction	27
3.2.2.2. Appearance	27

3.2.2.3. Viscosity	27
3.2.2.4. Volume	27
3.2.2.5. pH	28
3.2.3. Characteristics of spermatozoa	28
3.2.3.1. Sperm count	28
3.2.3.2. Morphology	29
3.2.3.3. Percentage motility	30
3.2.3.4. Percentage viability	30
3.2.3.5. Agglutination	30
3.2.4. Sperm function tests	31
3.2.4.1. Motility assessment by CASA	31
3.2.4.2. Sperm-cervical mucus penetration	31
3.2.4.3. Capacitation and hyperactivation	31
3.2.4.4. Sperm–zona interaction	32
3.2.4.5. Acrosome reaction	32
3.2.4.6. Zona-free hamster oocyte penetration assay	33
3.2.4.7. Reactive oxygen species in the seminal fluid	33
3.2.4.8. Sperm chromatin stability assay (SCSA)	34
3.2.4.9. Hyaluronan binding Assay (HBA)	34
3.3. Female reproductive system	36
3.3.1. Introduction	36
3.3.2. Development	37
3.3.3. Ovaries	37
3.3.4. Oviduct (Fallopian tube)	38
3.3.4.1 Uterine tubal fluid	38
3.3.5. Uterus	40
3.3.5.1. Menstrual phase	41
3.3.5.2. Proliferative phase	41
3.3.5.3. Secretory phase	41
3.3.5.4. Uterine fluid (Endometrial secretion)	42
3.3.5.4.1. Introduction	42
3.3.5.4.2. Composition	43
3.3.5.4.3. Role in infertility	45

3.3.6. The cervix	45
3.3.6.1. Cervical mucus	46
3.3.6.1.1. Introduction	46
3.3.6.1.2. Composition	47
3.3.6.1.3. Functions of cervical mucus	48
3.3.6.1.4. Assessment of the quality of cervical mucus	49
3.3.6.1.5. sperm-cervical mucus interaction and infertility	49
3.3.7. Sperm survival and transport in the female reproductive tract	51
3.3.7.1. Introduction	51
3.3.7.2. Vagina	52
3.3.7.3. Cervix	52
3.3.7.4. Uterus	53
3.3.7.5. Uterotubal junction	55
3.3.7.6. Fallopian tubes	55
3.4. Fertilization	58
3.5. Infertility	60
3.5.1. Introduction	60
3.5.1.1. Primary infertility	60
3.5.1.2. Secondary infertility	60
3.5.2 Types of infertility and prevalence in the world	62
3.5.3. Types of infertility and prevalence in Sri Lanka	63
3.5.4. Female infertility	63
3.5.5. Male infertility	65
3.6. Evaluation and treatment of the infertile couple	70
3.6.1. Introduction	70
3.6.2. Male partner	71
3.6.2.1. Medical history and physical examination	72
3.6.2.1.1. History taking	72
3.6.2.1.2. Physical examination	74
3.6.2.1.2.1. General examination	74
3.6.2.1.2.2. Examination of the penis	75
3.6.2.1.2.3. Examination of the testis	76
3.6.2.1.2.4. Examination of the epididymis and ductus deferens	77

3.6.2.1.2.5. Examination for varicocele	78
3.6.2.1.2.6. Examination inguinal region and prostate	78
3.6.2.2. First-level diagnostic tests	79
3.6.2.2.1. Semen analysis	79
3.6.2.2.2. Hormonel measurements	81
3.6.2.3. Second-level diagnostic tests	81
3.6.2.3.1. Bacteriological examination and scrotal ultrasound	81
3.6.2.3.3. Genetic assessment	82
3.6.2.4. Third-level diagnostic tests	83
3.6.2.4.1. Testicular biopsy	83
3.6.2.4.2. Sperm function tests	84
3.6.3. Female partner	84
3.6.3.1. Medical history and physical examination	84
3.6.3.1.1. Medical history	84
3.6.3.1.2. Physical examination	87
3.6.3.2. First-level diagnostic tests	88
3.6.3.2.1. Assessment of ovulatory function	88
3.6.3.2.2. Tubal patency assessment	89
3.6.3.3. Second-level diagnostic tests	90
3.6.3.3.1. Cervical factors	90
3.6.3.3.2. Abnormal sperm-cervical mucus interaction	91
3.6.3.3.3. Uterine abnormalities	91
3.6.3.3.4. Tubal factors	92
3.6.3.3.5. Genetic assessment	92
3.6.4. Unexplained infertility	93
3.6.5. Other factors to be considered with infertility	93
3.6.5.1. Anti-sperm antibodies (ASA)	93
3.6.5.1.1 Introduction	93
3.6.5.1.2. Etiology of ASA formation	95
3.6.5.1.3. Pathogenesis of ASA-mediated infertility	98

3.6.5.2. Chlamydia infection	100
3.6.5.2.1. Introduction	100
3.6.5.2.2. Detection of the infection	102
3.6.5.3. Ureaplasma infection	103
3.7. Treatment of infertility	104
3.7.1. Treatment of the infertile female	104
3.7.1.1. Anovulation	104
3.7.1.2. Endometriosis	105
3.7.1.3. Vaginal, cervical and uterine factors	106
3.7.1.4. Tubal infertility	106
3.7.2. Treatment of the infertile male	107
3.7.2.1. Rational treatment (medical or surgical)	107
3.7.2.2. Empirical treatment	108
3.7.3. Treatment options available for ASA	109
3.7.4. Treatment for chlamydial infection	110
3.7.5. Management of sperm-cervical mucus penetration abnormalities	110
3.7.6. Unexplained infertility	111
3.7.7. Medically assisted conception and Assisted Reproductive Techniques	111
4. Method	113
4.1. Pilot study	113
4.2. Main study	114
4.2.1. Introduction	114
4.2.2. Questionnaire	115
4.2.3. Collection of seminal fluid samples	116
4.2.3.1 Assessment of seminal fluid parameters	117
4.2.3.1.1 Volume	117
4.2.3.1.2. pH	117
4.2.3.1.3. Sperm concentration and total count	117
4.2.3.1.4. Motility	118
4.2.3.1.5. Agglutination	119
4.2.3.1.6. Bacteria	119

4.2.4.1.7. Sperm viability and morphology	119
4.2.3.1.7.1. Viability	119
4.2.3.1.7.2. Morphology	120
4.2.3.1.8. Screening for ASA (IgG) and interpretation	120
4.2.4. Sperm-cervical mucus interaction test	121
4.2.4.1. Collection of the sample	121
4.2.4.2. Evaluation of the cervix and cervical mucus	121
4.2.4.2.1. External cervical OS	121
4.2.4.2.2. Cervical mucus volume	122
4.2.4.2.3. Consistency of CM	122
4.2.4.2.4. Ferning of CM	122
4.2.4.2.5. Spinnbarkeit	123
4.2.4.2.6 Cellularity	124
4.2.4.2.7. pH	124
4.2.4.3. Sperm-cervical mucus interaction test and interpretation	124
4.2.5. Sperm-intra uterine fluid interaction test	126
4.2.5.1. Collection of the sample	126
4.2.5.2. Sperm-intrauterine fluid interaction test and interpretation	129
4.2.6. Assessment of chlamydia infection	131
4.2.6.1. Testing female patient	131
4.2.6.1.1. Sample collection	131
4.2.6.1.2. Test procedure	132
4.2.6.1.3. Interpretation	132
4.2.6.2. Testing male patient	133
4.2.6.2.1. Sample collection	133
4.2.6.2.2. Test procedure	133
4.2.6.2.3. Interpretation	133
4.3. Inter-examiner variability	134
4.3.1. Sample selection	134

5. Result	135
5.1. Pilot study	135
5.2. Main study	136
5.3. Intra-observer variation	151
6. Discussion	152
6.1. General considerations	152
6.2. Correlation between cervical mucus and IUF hostility	155
6.3. ASA IgG type	157
6.4. Chlamydia infection	159
7. Conclusion	162
8. Recommendations	163
9. References	164
10. Publications	i to ii
11. Annexes	i to viii
