CHAPTER 1 - INTRODUCTION	1
1.1 Objectives of the study	1
1.2 Previous studies	1
1.2.1 General studies on coastal geomorphology	2
1.2.2 Studies on coastal processes and morphology	2
1.2.3 Studies on coastal changes	3
1.2.4 Studies on coastal erosion hazards	4
1.2.5 Studies on coastal conservation	4
1.2.6 Other studies on the coastal environment	4
1.3 Scope of the present study	5
1.4 Methodology and techniques	5
1.4.1 Methodology	5
1.4.2 Techniques	5
CHAPTER 2 - GENERAL PHYSICAL BACKGROUND	8
2.1 The general terrain configuration	8
2.2 The geological context	8
2.3 The Quaternary	9
2.3.1 The Older Group	11
2.3.1.1 The Ferruginous Gravels	11
2.3.1.2 The Terrace Gravels	12
2.3.1.3 The Red Earth Formation	12
2.3.2 The Younger Group	13
2.4 Climate	15
2.5 Soils	17

	<u>Page</u>
CHAPTER 3 - SUBMARINE MORPHOLOGY AND COASTAL PROCESSES	18
3.1 The sea bottom configuration	18
3.2 Seas, swells and fetch	20
3.3 Waves	22
3.4 Currents	24
3.5 Littoral drift	25
3.6 Wind characteristics	28
3.7 Tides	29
3.8 Seasonal changes of sea level	30
CHAPTER 4 - GEOMORPHOLOGY OF THE SOUTHEASTERN COAST	31
4.1 Introduction	31
4.2 Categories of landforms of the southeastern coastal plain	33
4.3 Details of the major landforms of the southeastern coast	35
4.3.1 Spits and barriers	35
4.3.2 Recent and former beaches	41
4.3.3 Former bay beaches	42
4.3.4 Lagoonal beaches and lagoonal floors	46
4.3.5 Dunes and associated features	52
4.3.6 Landforms of fluvial origin	58
4.3.7 Planation surfaces and other denudational forms	60
4.3.8 Other landforms	63
CHAPTER 5 - QUATERNARY ENVIRONMENTAL CHANGES	64
5.1 Introduction	64
5.2 Climatic changes	64
5.3 Sea level changes	65
CHAPTER 6 - GEOMORPHOLOGICAL EVOLUTION OF THE SOUTHEASTERN COAST	70
6.1 Spatial and temporal aspects	70
6.2 Spatial evolution of the southeastern coast	70
6.2.1 The Kalametiya-Lunama system	70
6.2.2 The Welipatanwila system	75
6.2.3 The Walawe River estuarine system	78
6.2.4 The Sittarakala system	78

	<u>Page</u>
6.2.5 The Hambantota system	81
6.2.6 The Koholankala system	83
6.2.7 The Malala-Embilikala system	85
6.2.8 The Bundala and Kirindi Oya systems	87
6.3 The evolutionary stages: temporal aspects	88
6.4 Differences of materials formed in the various evolutionary stages	89
6.4.1 Sand, silt and clay	89
6.5 Provenance of sediments based on heavy minerals	91
 SUMMARY AND CONCLUSIONS	 98

 APPENDIX I	 105

ACKNOWLEDGEMENTS

I wish to express my deep gratitude to Prof.Dr. H.Th. Verstappen for his valuable advice, supervision and constructive criticism on the entire manuscript of this thesis. His patient, organized guidance inspired me to transform this task into reality.

Drs. N.H.W. Donker, who helped me to process the laboratory data by using his computer programmes, is also remembered with much gratitude.

I am also grateful to Mr. P. Hofsteenge, who read through the entire manuscript with patience and made valuable suggestions.

My gratitude is also expressed to Dr. A.M.J. Meijerink, Dr. R.A. van Zuidam and Drs. R.P.G.A. Voskuil, who gave me special training on aerospace survey techniques.

Dr. A. Manus, Department of Mining, Delft University of Technology, The Netherlands, is remembered gratefully for his valuable guidance on the analysis of heavy minerals.

Prof.Dr. Kanthi Rathnayaka, Department of Geography, Ruhuna University, Sri Lanka, who encouraged me in numerous ways to complete this work, is reminded with much appreciation and gratitude.

I am grateful to Ms. Kanthi Vitharana and Mr. W.N. Wilson, Department of Geography, University of Colombo, Sri Lanka, who helped me to fulfil this work.

I also wish to thank Mr. M. Liyanage, Department of Geography, University of Colombo, Sri Lanka, who helped me with laboratory work.

I extend special thanks to Mrs. M. Völker for her enthusiastic, prompt and accurate typing of this thesis.

Upali Weerakkody.

ITC, Enschede, The Netherlands,  
Late Summer 1985.
